Flowchart

Start
Create circular linked list and add processes (Enter Process ID and Burst Time)
Enter Time Quantum
Initialize current time = 0 and set first process as current
Are all processes completed?
No
Yes
Select next unfinished process from circular list
Execute for min(quantum, remaining time)
Update remaining time and current time
Process finished?
No
Yes
Calculate waiting time and turnaround time for the process
Display Gantt Chart and Scheduling Results (Waiting Time, Turnaround Time, Average Times)
Stop
= Start / Stop
= Input / Output
= Process
= Decision
= Flow direction
