Flowchart

Flowchart – Round-Robin CPU Scheduling
Using Circular Linked List (Original Project)
Start
Input number of processes (n)
For each process i = 1 to n,
input burst time and create node
in circular linked list
Input time quantum (q)
Initialize current = head
and set remaining time for each process
Are all processes
completed?
Yes
Display process
execution order
Stop
No
Check current process
(remaining time > 0)
Is remaining time
> time quantum?
Yes
No
Execute process for
time quantum (q)
Reduce remaining time
(remaining time -= q)
Execute process for
remaining time
Mark process as completed
(remaining time = 0)
Move to next process
(current = current->next)
